

Fellowship workshop for Ph.D. students

The School of Graduate Studies-Newark Health Science Campus will be having a workshop on Thursday September 19, from 4-5 pm in MSB B619 to help guide biomedical graduate students and their mentors in the grant application process so that they can identify fellowships for which students are eligible and learn how to submit a successful application.

Because a majority of our students are interested in research positions in academia or industry, we believe it is important for our students to gain more experience writing fellowships. Graduate student fellowships are a great way to support a student and are indicative of past success when applying for a postdoc or job. Our graduate students have a great track record of obtaining grants.

This workshop will include presentations by:

- 1) A representative from GradFund talk about how her organization at Rutgers helps students identify funding opportunities and write the grant. We will also discuss which grants are open to non US-citizens.
- 2) A faculty member who reviews F grants for the NIH talk about what makes an application stand out and get a good score.
- 3) A panel of graduate students who have successfully obtained funding talk about the application process and what made their proposal successful.

We hope students and mentors can attend this event together to learn how to successfully apply for a fellowship. No registration is necessary.
